OVERVIEW

Full Stack Mobile Developer specializing in Flutter and React with experience building scalable, high-performance applications across Android, iOS, and web. Skilled in designing intuitive user experiences, integrating REST APIs, and implementing secure authentication flows (JWT, OTP, role-based access). Strong hands-on experience in real-time features such as WebSocket chat, push notifications, media uploads, and location-based services. Adept at collaborating with cross-functional teams, optimizing app performance, and delivering clean, maintainable architectures (MVVM/MVI) backed by MySQL and PostgreSQL databases.

EDUCATION

Bachelor of Technology, Computer Science, DIT University, Dehradun 2019 - 2023
CGPA: 7.56

Intermediate, Presidency The International School, Rajasthan 2019
CGPA: 8.90

High School, Presidency The International School, Rajasthan 2017
CGPA: 8.80

SKILLS

Programming Languages	Dart, JavaScript, Java, TypeScript, SQL
Frameworks	Flutter, React.js, Node.js, Express.js
Mobile	REST APIs, WebSockets, Firebase, Socket.IO, Google Maps SDK
Databases	MySQL, PostgreSQL
Tools	Git, GitHub, Android Studio, VS Code, Postman, Figma
Concepts	State Management (Provider, Bloc), MVVM/MVI, Clean Architecture, Responsive UI/UX, Authentication (JWT, OTP), Push Notifications

EXPERIENCE

CodeBiceps Private Limited January 2025 – Present
Full Stack Engineer

- Contributing to a warehouse management platform using React.js, improving task handling and inventory workflows.
- Developing a cross-platform cargo transportation mobile app using Flutter with real-time data, role-based UI, and optimized navigation flows.
- Collaborating with senior developers while independently managing feature development, debugging, and delivery timelines.

Rapturous Technologies Private Limited June 2024 – December 2024
Mobile App Developer (Flutter)

- Built core modules for a Flutter-based warehouse management application including storage flows, task assignment, and reporting.
- Improved app stability and UX by refactoring widgets, optimizing API integration, and handling edge-case failures.
- Strengthened skills in scalable mobile development, problem-solving, and production-level debugging in a fast-paced environment.

PROJECTS

MotorAxe – Car Wash Application Flutter, Dart

- Built a car-wash booking app with multi-vehicle support and package-based service selection.
- Integrated Google Maps, Geolocator, and Geocoding for accurate location and service availability.
- Implemented Razorpay payments and automated booking status tracking.
- Added real-time booking updates, push notifications, and reminders with Firebase Messaging.
- Improved usability through carousel sliders, scheduling flows, and smooth UI interactions.

DTA – Transport Management System Flutter, Dart

- Developed a complete transport management system with role-based workflows for users and drivers.
- Implemented JWT + OTP authentication, secure document upload, and real-time chat with WebSockets.
- Built responsive UIs for trip management, communication, and push notifications.
- Integrated backend APIs enabling scalable, real-time operations across the platform.

Ecstasy – Social & Media Sharing App Flutter, Dart

- Developed real-time messaging, media sharing, and persistent sessions for a social media application.
- Integrated secure file handling using dio, file_picker, and Amazon S3 Cognito.
- Implemented image/video upload and playback with image_picker, video_player, and chewie.
- Enhanced UX with animations and optimized media loading via cached_network_image.
