PROFESSIONAL PROJECTS

◆ Akesa Health

Akesa Health uses music and animations to manage stress, acting as a first step or supplement to therapy. It empowers users to unlock their brain's self-healing potential for improved well-being.

◆ CubeCare

CubeCare streamlines curtain scheduling and installation in hospital rooms using barcode technology, ensuring efficient tracking and management to improve workflow in healthcare facilities.

◆ Keeboot Lite: TMS System

Keeboot Lite is a newer version of Keeboot that manages shipper, transporter, and driver operations in a single app with role-based access.

◆ Keeboot : TMS System

Keeboot: TMS System manages logistics operations with three separate apps for shipper, transporter, and driver-related tasks.

◆ Smart Home app

Smart Home app enables users to manage household devices via beacon technology, automatically turning them on or off based on proximity to beacons.

◆ Smart Socket app

Smart Socket app lets users remotely control their smart sockets, turning the power on or off from anywhere for efficient device management.

◆ Smart Offers app

Smart Offers displays personalized offer pop-ups when users are near beacons in shops or malls, providing location-based promotions and discounts.

◆ Massager app

Massager app controls a device integrated into furniture, allowing users to turn it on/off and customize massage settings for specific body areas (upper or lower).

◆ Denise App - Recycle Reminder

Recycle Reminder notifies users about upcoming waste collection events, informing them of when and where the collection will take place, so they can be prepared and manage their recycling efficiently.

◆ Track.IO

Track.IO is a project designed to manage the x, y coordinates of building floors, allowing users to visualize route paths and receive fire safety alarm alerts, ensuring efficient navigation and safety within the building.

◆ Custom's Paper (GLS Ireland)

This app allows the customs company to digitally record information and generate PDFs from user input, eliminating the need for physical paperwork and copies.

◆ **Compulog Journey**

The app tracks driving activities such as start time, rest time, idle time, and stop driving. Using a real-time timer, it manages these metrics even when the app is running in the background, ensuring accurate tracking throughout the journey.

◆ **Driver Driving Analysis App**

The app provides real-time driving analysis by displaying the driver's driving data in dynamic charts, offering instant insights into driving behavior and performance.

◆ **Luxury Qatar App**

The app showcases luxury product details and enables users to purchase high-end items, providing a seamless shopping experience for premium products.

◆ **Tkontak App**

Tkontak is an app that allows users to search for people by name, username, email, or vehicle information. This feature helps users connect with individuals they encounter on the road based on the vehicle they drive.

◆ **Peak Android App**

A social media app featuring feed posts, likes, comments, and both one-on-one and group chat functionalities.

◆ **Dead Industry Radio Host Door**

The app allows users to purchase tickets before an event and scan them using barcodes for entry.

◆ **VWORDS! – A daily live game with cash prizes.**

VWORDS! is a daily live game with cash prizes, featuring real-time leaderboards, Firebase authentication, chat integration, PayPal cash-out, and custom game features like a timer and sound.

◆ **3MAYDAY - One Call To Reach Them All**

3MAYDAY is an app that enables video calling with multiple takers, live location tracking, and emergency SOS features. It includes Firebase authentication, contact management, real-time notifications, and custom calling screens.

◆ **Dwarkesh Enterprise**

Dwarkesh Enterprise User and Admin apps use Firebase Realtime Database and chat features. The User app supports product listings, inquiries, and orders, while the Admin app manages product updates, inquiries, and orders.

◆ **Realtime Ball detection and tracking using OpenCV/NDK C++**

The project implements real-time ball detection and tracking through the camera using OpenCV and C++ in NDK.

◆ **Looks : A Professional Photo Editor**

Looks is a professional photo editor featuring GPUImageView filters, photo adjustments (brightness, contrast, sepia, etc.), undo/redo, PIP frames, photo blenders, and sticker/text resizing, rotating, and moving.
