PROFESSIONAL SUMMARY

User-focused UI/UX Designer with 1+ year of experience designing intuitive websites, dashboards, and admin panels across AI platforms, healthcare, e-commerce, and non-profit domains.

WORK EXPERIENCE

UI/UX Designer – SRNR IT Solutions

Designed websites, dashboards, wireframes, high-fidelity mockups, and interactive prototypes using Figma and Adobe XD. Collaborated with developers to ensure usability and consistency. Worked on multiple client projects across AI, healthcare, and e-commerce domains.

KEY PROJECT

IntelliStack – AI-Powered Application Development Platform

IntelliStack is an AI-driven platform designed to automate the creation of full-stack software applications, including database design, backend services, frontend interfaces, cloud deployment, and third-party integrations. The system leverages intelligent prompts to generate logical data models, APIs, and UI components while supporting multi-cloud environments such as AWS, Azure, and GCP. It integrates an AI Hub for service, database, and code generation, continuously improved through user feedback. The platform includes secure multi-tenant integration management for API mapping, data transformation, and credential handling. A centralized dashboard enables users to manage the complete application lifecycle, including testing, deployment, monitoring, and continuous updates.

Impact: Simplified end-to-end application creation and improved developer productivity through AI-driven automation and centralized lifecycle management.
