Career Objective

Passionate and self-driven BCA graduate focused on building a career in web development. Skilled in Laravel, PHP, and MySQL with a strong understanding of MVC architecture and real-time API integration. While my primary focus is on backend web development, I also have prior experience in Android app development using Java, which has strengthened my overall programming and problem-solving skills. Eager to contribute to a dynamic development team and grow as a full-time web developer.

Skills

- Web Development: Core PHP, Laravel framework, API, Rest API, MySQL, HTML, CSS, Session Handling, Bootstrap
- Programming Languages: PHP, Java, C, C++
- Database: MySQL, Firebase Realtime Database
- Office Tools: Microsoft Word, Excel, PowerPoint
- Android Development: Java, Android Studio, Firebase, MVVM, LiveData
- Languages: Hindi, English, Punjabi

Tools & Technologies

- Git, GitHub, Visual Studio Code, Postman API, Infinity Free & Hostinger.

Strengths

- Quick learner and problem solver
- Logical thinker with good problem-solving
- Good communication skills
- Able to work well both in a team and independently
- Dedicated and hardworking

Education

- BCA from Guru Nanak Dev University, 2022
- 12th from PSEB Board, 2018
- 10th from PSEB Board, 2016
- 1-year Diploma in Computer Software and Hardware

Experience

Fresher – Currently enhancing my web development skills through Laravel projects. Actively applying for junior PHP/Laravel Developer roles.

Projects:

🔗 **ClearSky** – Weather Forecast App which made using laravel framework

🔗 Live: <https://clearsky.free.nf>

🔗 GitHub: github.com/dsharma00026/ClearSky

A Laravel web application to fetch real-time weather details by city using WeatherAPI.

Features:

User authentication (registration, login, logout)

Real-time weather data via API.

Recently searched cities stored in DB

Contact form with validation and DB storage

Mobile-responsive UI (Bootstrap 5)

Live deployment on InfinityFree

• Job Listing Website [Use: core php ,MySQL , html, css,VS Code]

PHP web app for job portal with two types of users: employers and job seekers. Employers post jobs and see applications. Job seekers can browse and apply for job.

Learned session management and role-based login.

- **User Authentication System[use: core php, MySQL, html, CSS, vscode]**

Simple PHP website with login and signup pages. Managed user sessions and password encryption. Learned how login systems work with PHP and MySQL.

Additional Android app project:

- **API Scanner. [use: java, firebase database, firebase ml kit , camera android studio]**

Final year Android project to scan documents like Aadhaar and PAN card using camera. Used Firebase ML Kit to read text from images and separated important details like name, father's name, DOB, PAN number. Data saved in Firebase database or Excel file. Learned about text recognition and working with images.

- **Premix [use: android studio,mvvm, own api, MySQL, Java]**

Movie streaming Android app where users can watch and download movies. Used MVVM architecture and LiveData. Learned about API integration and SQL databases.

- **Room of Online Tournament[use:java, android studio, firebase database,own algorithm, excel]**

An app for hosting online game tournaments like PUBG and Free Fire. Users can join tournaments by paying entry fees in app wallet and get rewards. Used Firebase for database and user management.
