ABOUT ME

I am a final-year MCA student interested in Full Stack Web Development, with more focus on frontend development. I have experience in creating responsive and user-friendly websites using modern frontend technologies. I can design clean interfaces, add interactive features, and make websites work smoothly on different browsers and devices. I also have basic knowledge of backend development, including how servers, databases, and APIs work. I understand how the frontend and backend connect in a full stack application. I am a fast learner, pay attention to details, and enjoy writing clean and simple code. I am looking for an opportunity to gain industry experience, improve my skills, and contribute to building efficient web applications.
